Module 16 – Project 3

Project – S3 bucket with SFTP service.

Here we will see how we can use S3 bucket to store the data and user will be using SFTP service. So we will create the bucket again and then we will create the SFTP service.

- Choose Protocol as SFTP.
- Identity provider type - as Service managed.
- Domain – Amazon S3.
- Now upload the private host keys.
- We can generate the private keys using ssh-keygen command.
- Click on create.
- Now we have to add a user who will have permission to connect to this SFTP server.
- Click on Add user.
- Specify the name and also upload the SSH Public keys.
- Now let see if we are able to connect the bucket.
- Sftp -i path to private keys username@sftp
